Where could the water possibly have gone?

Finally, they sat back and pored over the map. "We haven't seen that tank yet," Divya pointed to one of the tanks they had drawn.

"Let's go," Rani agreed.

Divya and Rani began climbing up the hill. The stream here was dry as well.

"Maybe we shouldn't have missed school. This tank is probably dry as well," Rani said sadly.

When they reached the tank, Divya and Rani realised they were wrong.

This tank was full!

Rani pointed at a small pump at the end of the lake. There was a tanker just below the bund, collecting water as it flowed. A man stood by, guiding the tanker.

"Mystery solved," said Divya angrily.

"Where are you taking our water?" Divya wanted to know.

"The city," the man said. "I need to supply nine-thousand litres today!"

"That's not fair!" Rani said.

The man shrugged, "That's how it is."

"My friend is a Sanitary Engineer," Divya yelled. "She knows what's fair."

The man laughed. "Sanitary Engineer it seems! You're just children!"

Rani said quietly, "Yes, but I know you can't just take our water away."

"Go home," the man said. "You can't change anything!"

Divya had an idea. She hugged the pump. "You can't turn it on now!"

Rani ran up to hug the pump too.

"Hey!" said the man. Now he was really angry. "Just go home," he said.
