Example 2

A car factory produce 3750 cars per month (30 days).
Find how many cars were produced per day.

Divide 3750 by 30 days.

3750 ÷ 30

Step: 1

```
      1
   ------
30 | 3750
   -30
   ----
     7
```

Choose first 2 digit 37 from the dividend
Divide 37 by 30
Calculate the number of 30's in 37
1 X 30 = 30

Step: 2

```
      1
   ------
30 | 3750
   -30↓
   -----
     75
```

subtract30 from 37, we get 7
Next bring down the 5 in ten's place

Step: 3

```
      12
   ------
30 | 3750
   -30↓
   -----
     75
    -60
   -----
     15
```

Divide 75 by 30.
Calculate the number of 30's in 75
2 X 30 = 60
Subtract 60 from 75 we get 15

Step: 4

```
      125
   ------
25 | 3750
   -30↓ |
   -----|
     75 |
    -60↓
   -----
     150
    -150
   -----
       0
```

Next bring down the '0' from unit place.
In 150, calculate how many 30's
5 X 30 = 150

Quotient = 125,
Remainder = 0

The remainder is zero in the above example. The remainder can be a non-zero number also.
