6.4 Representation of Data by Tally Marks

Any collection of information in the form of numerical figures giving the required information is called Data.

In olden days primitive man used to count and verfy his livestock using stones. This is the first data gathering method. Nowadays we use many methods to collect information. The most efficient method is to keep a **"tally marks"**.

Example 1

An information collected about the number of vehicles which crossed a school on a particular time are shown below.

Car	IIIIIIIIII
Van	IIIIII
Lorry	IIIIIIIIIII
Two wheelers	IIIIIIIIII
Bus	IIII

'1' is called a 'tally mark'. It is difficult to count if there are more number of tally marks.

Therefore to make it easier to count, we change it as follows.

II - 2	IIII II - 7
III - 3	IIII III - 8
IIII - 4	IIII IIII - 9
IIII - 5	IIII IIII - 10
~~IIII~~ I - 6	IIII IIII I- 11

Note:
We can use tallymark to record data of a variety of things with large numbers.

Solution

Vehicles	Tally mark	No. of vehicles
Car	IIII IIII I	11
Van	IIII II	7
lorry	IIII IIII III	13
Two wheelers	IIII IIII II	12
Bus	IIII	4

Answer the following questions:

1. Which vehicle crossed the school maximum in numbers?
   Answer: lorry
2. Find the total number of vehicles which crossed on a particular time? Answer: 47
