Try this

Find L.C.M

1. 10 and 15 2. 8 and 6 3. 4 and 10 4. 6 and 16

Example

Multiply the common factors and other Factors of two numbers to get its L.C.M

Find L.C.M of 8 and 12

2 | 8	2 | 12
2 | 4	2 | 6
2 | 2	3 | 3
1	1

$8 = \boxed{2} \times \boxed{2} \times 2$

$12 = \boxed{2} \times \boxed{2} \times 3$

L.C.M of 8, 12 = 2 x 2 x 2 x 3 = 24.

Do you Know?

If one number is a multiple of another number, then the bigger number is L.C.M and smaller number is H.C.F.

Example

L.C.M of 4, 16 is 16

H.C.F of 4, 16 is 4

Think it

Can we say the highest common multiples for two numbers?
