Activity 2

- Take some water in a beaker and mark its level.
- Take a solid, that is, potato and immerse it in the beaker containing water.

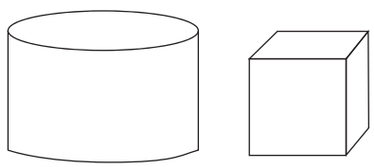

What do you observe?

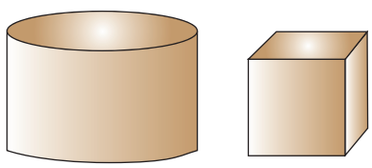

E9R1F5

Activity 3

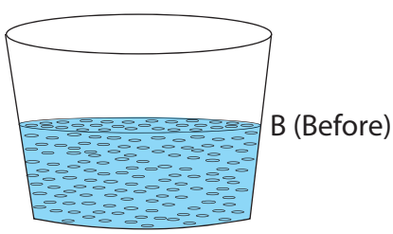

1. Take 2 sheets of same size (may be an old rough paper).
2. Using scissor and glue make a cylindrical and a cubical box.

3. Fill both with sand and cover all the ends.

4. Take a bucket. Partially, fill the bucket/tub with water. Mark the water line.

Before immersion

5. Now, if we dip the sand-filled cubical box inside the bucket/tub, will there be any change in the water level? If so, will it increase or decrease?
