Note: In your higher class you will learn about two more inequalities, that is '≥' and '≤'. These, two symbols can be read as, greater than or equal to (≥) and lesser than or equal to (≤).

Example 4.2

Fill in the boxes between the expressions with <, = or > as required in the following.

(i) (7 + 8) ☐ (20 ÷ 2)

Solution

First, we have to add 7 and 8

7+8 = 15,

Now, we divide 20 by 2, we get

20 ÷ 2 = 10

Therefore, (7 + 8) ☐ (20 ÷ 2)

15 ☐ 10

Hence, (7 + 8) ☐ (20 ÷ 2).

(ii) (12x3) ☐ (9x4)

Solution

First, we have to multiple 12 by 3

12 x 3 = 36

Now, multiplying 9 by 4, we get,

9 x 4 = 36,

Since, (12 x 3) and (9 x 4) is equal, we have,

(12 x 3) ☐ (9 x 4).

(iii) (15-5) ☐ (8x3)

Solution

First, we have to subtract 5 from 15.

15 - 5 = 10

Now, multiplying 8 by 3, we get,

8 x 3 = 24

Since, (15 - 5 = 10) is less than (8 x 3 = 21), we have,

(15 - 5) ☐ (8 x 3).
