

2 Electrical Appliances

WLEPA

Electric energy is used in many domestic appliances such as electric stove, iron box and fan. Electric energy flows into the coil in the devices. As current flows, it heats up the coil. With the help of this heat energy, we do many useful works. Thus, electrical energy is converted into heat energy. Electical energy is converted to mechanical energy in fan, light energy in bulb and sound energy in computer.

Heat Energy

Light and Sound Energy

Light Energy

Mechanical Energy

3 Driving a Car

We use fuel in the form of petrol or diesel or gas to run vehicles. When this fuel burns in the engine, chemical energy is converted into heat energy. Burning fuel produces hot gases which pushes the piston in the engine to move the vehicle. Thus heat energy is converted into mechanical energy.

Do you know?

Photosynthesis changes solar energy into chemical energy.
