Name of the Scientists	Department	Contribution
Dr. M.S. Swaminathan	Genetics	Green Revolution
Srinivasa Ramanujam	Mathematics	Composite Numbers
Venkataraman Radhakrishnan	Biology	Structure of Ribosome
Dr. A.P.J. Abdul Kalam	Aeronautical Engineering	Missile development
Sir. C.V. Raman	Physics	Scattering of light

1 Sir. C.V. Raman (1888-1970)

Chandrasekhara Venkata Raman was born at Trichirapalli, Tamil Nadu on 7th November, 1888. In 1904, he completed his Bachelor of Arts (B.A) degree at Presidency College, Chennai. He stood first and won gold medal in Physics. In 1907, he got his Master of Science (M.Sc) degree from University of Madras.

Sir.C.V. Raman won the Nobel Prize in Physics in the year 1930 for his work in scattering of light. In 1954, he was awarded the Bharat Ratna.

Blue appearance of Sky

One day in the summer of 1921, Sir.C.V. Raman was on the deck of a ship sailing in the mediterranean sea. He was observing the blue colour of the sky and started reasoning it. He concluded that sunlight is scattered by the gases and particles present in the air. The white light we see is composed of different colours such as violet, indigo, blue, green, yellow, orange and red (VIBGYOR). Among these colours, blue is scattered more. Because of this reason, sky appears blue most of the time. During sunrise and sunset, rays have to travel long distance. As they travel, all other colours except red are scattered. So, sky appears red at sunrise and sunset.

Do you know?

National Science Day is celebrated on 28th of February in order to commemorate the invention of the Raman Effect by Sir. Chandrasekhara Venkata Raman on the same day in the year 1928.
