2 Poultry Farms

In poultry farms avian species are reared and bred for the purpose of egg, meat or both. Fowls, ducks, geese, turkeys and some verities of pigeon are the most commonly reared species. Chicken occupy 90% of the total poultry. Poultry birds grown for meat are called broilers. Layers are the female fowls grown for egg production. The poultry industry is important in providing a balanced diet for human population. Proper management of poultry includes methods of hatching, rearing, housing, sanitation, prevention of diseases and a sound marketing system. In Tamil Nadu famous poultry farms are found in places like Namakal, Palladam and Chennai.

❖ Breeds

There are more than hundred breeds of fouls. Fowls are classified on the basis of their utility to man. They are: meat type (broiler), egg type (egg layer) and dual type. Assel, Chittagong, Ghagus, Busra, Brahma and Cochin are some of the breeds found in our country. Local and indigenous birds are reared in rural places. Traditionally these birds have a poor meat production capacity compared to commercial broiler and layers. But meat and egg from this type of poultry is better than other commercial poultry.

Do you know?

India ranks fifth in poultry production in the world.

Whitelegon is the most egg yielding breed in the world.
