❖ Poultry management

Poultry birds need a clean environment. The following measures should be taken in order to avoid disases.

- ➔ Poultry houses should be clean and disinfected.
- ➔ It should have windows for ventilation.
- ➔ Light is essential for high egg production.
- ➔ Poultry birds need clean and fresh water.
- ➔ Timely vaccination is necessary to prevent diseases.

II. Apiculture

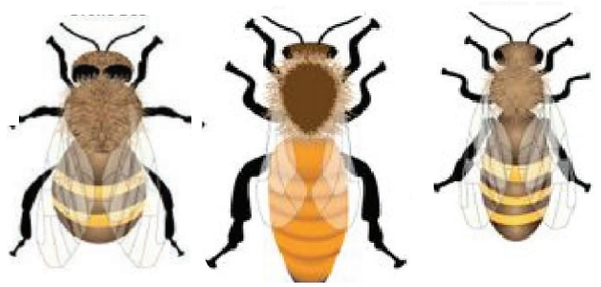

Rearing of honey bee for honey is known as apiculture. It is also called bee keeping. In this technique honey bees are reared in a specially designed wooden box. Honey bees have been very closely associated with humans since ancient times. Various products like honey and wax are obtained from honey bees. Earlier honey is extracted from the hives in the forests. Nowadays they are domesticated by farmers to produce honey. Bee keeping is a profitable rural based industry. Honey bees are social insects. The nest of honey bee is known as the bee hive. They live in colonies and show division of labour

1 Types of Honey Bee

Three types of honey bee are found in a colony. They are Queen bee, the Drones and the Worker bees.

❖ Queen Bee

The queen is the largest member of the bee colony. There is only one queen and it is the fertile female of the colony. They are formed from fertile eggs. The queen is responsible for laying eggs in a colony. It lays about two thousand eggs per day. The life span of the queen bee is 3-4 years.

Queen Bee Drone Bee Worker Bee

❖ Drones

Drones are the fertile males. They develop from unfertilized eggs. They are larger than the workers and smaller than the queens. Their main function is to fertilize the eggs produced by the queen. They also help in maintenance of hive temperature. The number of drones in a colony amounts to hundreds and sometimes to thousands. The normal life-span of a drone is 57 days.
