It is maintained by the International Union for Conservation of Nature (IUCN), an international organization working in the field of nature conservation. The Red Data Book contains colour-coded information sheets.

❖ Advantages of the Red Data Book

- It helps to evaluate the population of a particular species.
- The data given in this book can be used at the global level.
- The risk of a species becoming globally extinct can be estimated with the help of this book.
- It provides the necessary guidelines for implementing protective measures.

Do you know?

Red Data Book of India contains the conservation status of animals and plants which are found in the Indian subcontinent. Surveys conducted by the Zoological Survey of India and the Botanical Survey of India provide the data for this book.

III. Conservation of Animals

Biodiversity is the term used to describe different plants, animals, microorganisms, and insects etc. that are found on the earth. Conservation of biodiversity helps us to protect, maintain and recover the endangered animals and plant species. Conservation is the protection, preservation, management of wildlife and natural resources. Endangered species are maintained in certain protected areas such as national parks and wild life sanctuaries. In India, there are about 73 national parks and 416 wild life sanctuaries.

1 National Parks

A National park is an area which is strictly reserved for the betterment of the wild life. In these areas, activities like forestry, grazing or cultivation are not permitted. Even private ownership rights are not allowed in these areas. The national parks cover an area of 100 – 500 square kilometers.
