Nature of Human Evolution

Early humans lived in jungles along with animals. They used stone tools to protect themselves, drive away animals, dig out roots, shoots etc. The most important thing is that they ate everything raw including flesh. They did not know the use of fire in the beginning. At first, dog was their good companion. Wild animals ran away when dogs barked. **Dog** was the first pet animal.They took it wherever they went.

Later they started rearing cattle and were very useful to them. They observed some **grains** growing along the river side. They ate and found them very tasty. They observed that the scattered grains were eaten up by birds. They were keen observers. They found that the grains grow with the help of **sunshine** and **rainfall.** Thus, they learnt the art of **cultivation.**

Humans noticed **forest fire.** At first they were afraid of fire. They found some animals died due to fire. They ate the flesh of the burnt animals. It tasted good. They also observed that the **spark** came out by scratching two stones together. Since then, they ate cooked food.
